

A SENSITIVE DESIGN FOR SENSITIVE SKIN

Uni-Patch™ Stimulating Electrodes
featuring blue gel

**Clean, painless,
and easy to remove**

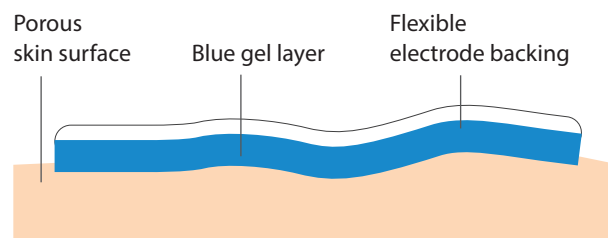

**Uni-Patch™ Stimulating
Electrode featuring blue gel**

Patients with skin sensitivities need special care. That's why we developed a Uni-Patch™ stimulating electrode featuring blue gel. A dependable choice for nonirritating, biocompatible skin adhesion.

Our proprietary blue gel:

- Bonds seamlessly to skin over hair and skin contours
- Provides a clean, efficient, temporary bond
- Is extra-thick for reliable adherence and reusability
- Provides excellent connectivity
- Removes easily with minimal pull to hair and skin

Through air displacement, our gel sticks and conforms completely to skin irregularities, voids, and pores.
