Suction

Suction

A critical part of airway management is suction. Failure to quickly clear an airway can lead to complications. From suction units to suction tubing and suction tips, we've got you covered.

Suction catheters

- D419 series catheters offers a full range of straight packaging
- Available in a complete range of continuous adult and pediatric sizes
- All Medline suction catheters feature easy-to-read depth markings
- DeLee tip is flat, soft and smooth to minimize airway trauma for pediatric patients
- Whistle tip is angled, soft and smooth to maximize suctioning capability for adult patients, while minimizing trauma potential

Vyaire Carefusion LTV Series 1200 ventilator

- The LTV 1200 ventilator offers both invasive and noninvasive modes of ventilation in pressure control, pressure support, volume control and spontaneous breath types
- Choose patient presets of infant, pediatric or adult to quickly configure initial ventilation before optimizing settings for each patient's needs
- Unique Spontaneous Breathing Trial (SBT) works using Rapid Shallow Breathing Index (RSBI) criteria to assess a patient's ability to be weaned; allows patient to synchronize breathing pattern with Pressure Support and/or CPAP with variable rise time, flow termination and time termination
- O₂ conserve feature reduces O₂ consumption when necessary and extends resource of O₂ during transport or emergencies
- Proprietary turbine technology in the LTV 1200 transport ventilator eliminates the need for a high-pressure air source, allowing transport ventilation where and when needed

Smiths Medical ViaValve™ safety IV catheters

- A unique valve inside the catheter hub impedes blood flow from the patient's vein upon initial venipuncture
- Maintaining a clean access site helps prevent the transfer of bloodborne pathogens from patient to caregiver on soiled gloves, clothing, bedding and dressings
- The catheter, once in the patient's vein, is activated by attaching the Luer fitting of an infusion line which opens the valve to allow unrestricted flow
- Safety guard surrounds the retracted introducer needle and produces a "click" to indicate that the needle is contained for handling and disposal
